

Gold Medal - SALMED 2020

1. BTL FLEXI

BTL POLSKA Sp. z o.o.

Flexi BTL is the smallest ECG on the market that easily fits in your hand. It is characterised by excellent recording quality, easy-to-read touch screen, simultaneous view of all 12 leads, very long-lasting battery, and a sturdy and robust design.

2. BTL-6000 HIL POWER

BTL POLSKA Sp. z o.o.

BTL-6000 HIL POWER is the only device on the market that offers therapy with high-intensity laser using a laser probe and scanning system with a thermal camera, which allows the assessment of the body temperature before and during treatment, a temperature sensor, and personalised preset protocols ensuring maximum safety and effectiveness of the therapy of acute and chronic diseases of the musculoskeletal system.

**3. GM85 Mobile Digital X-ray with iQuia™ detector Medikal Healthcare
SAMSUNG ELECTRONICS CO., LTD. / Medikal Systems Sp. z o. o.**

HIGH QUALITY MOBILE X-RAY SYSTEM with battery drive system. The device provides you with advanced technology enclosed in a sleek and handy device: – compact, – innovative technology, – speed and precision, – durability.

**4. AsCard Green Electrocardiograph with HIS communication in the HL7 standard
ASPEL SA**

AsCARD Green electrocardiograph is the best-in-class device combining quality and modern design. In conjunction with CardioTEKA HL7 software and with HL7 standard support, it allows you to communicate with Hospital Information Systems (HIS). It can also be used to perform tests in the full range of 12 leads and is equipped with a module for automatic analysis and interpretation. Small dimensions, low weight and communication with HIS using the HL7 standard makes Green extremely functional and inexpensive to use.

5. CardioTEST CPET ergospirometer – a system of standard stress tests for extended pulmonary assessment
ASPEL SA

CardioTEST CPET ergospirometer is an innovative diagnostic system for performing standard electrocardiographic stress tests with direct fitness assessment (VO₂) along with evaluation of the respiratory system and muscle metabolism on the basis of measurements of flow and concentration of the exhaust gases: oxygen and carbon dioxide. It is compatible with stress test and cardiac rehabilitation systems from Aspel. CPET cardiostest is a technologically advanced diagnostic tool appreciated for reliability, quality, usability and functionality.

6. Rabdotest-Lab
ALLMED AB sp. z o.o.

RABDOTEST-LAB is the world's first single-use test kit, used for the rapid detection of myoglobin in urine without the use of any test equipment.

7. Newborn care system in hospitals

FORMED Spółka z ograniczoną odpowiedzialnością Spółka Komandytowa

The FORMED newborn care system is an innovative approach to infant care. This solution directly affects the quality of medical care and helps to improve standards in hospitals. This station is safe, relieves midwives and schematises their work, and also allows for the involvement of the mother and father in child care activities. The modularity of the system allows for any space arrangement. We understand the role of care as an activity stimulating all the senses of the newborn, which is the strongest impetus for the development of the brain in the first days of life.

8. Voluson E10 Ultrasound

GE Medical Systems Polska Sp. z o. o.

MEDINCO POLSKA Spółka z ograniczoną odpowiedzialnością Sp.k.

Voluson E10 is the most innovative of the GE Voluson ultrasound family dedicated to obstetrics and gynaecology. Uncompromising technology in combination with the legendary ergonomics form a system that is an unsurpassed standard in terms of image quality and ease of obtaining a diagnostic image. As the only product on the market it can be equipped with a fully electronic eM6C curvilinear probe with active cooling, ensuring much faster processing of 3D/4D images.
