

### 1. AquaStop™

#### SMURFIT KAPPA POLSKA Sp. z o.o.

AquaStop™ is the latest innovation created as part of the Better Planet Packaging initiative. It is part of the new TechniPaper® portfolio, which includes a range of high-performance papers designed for even the most complex supply chains. AquaStop™ is water resistant thanks to a special coating added during the manufacturing process. Unlike many other coatings, it does not negatively impact recyclability. The paper can therefore be recycled similarly to standard paper packaging.

### 2. SafeClick packaging

#### TFP Sp. z o.o.

SafeClick: Designed with security in mind, our click-lock box restricts easy access to the interior. The locking elements, placed on both sides of the lid, are intuitive for adults, while at the same time effectively hindering access for children. The packaging is used to transport: capsules with plant nutrients, pet food and any other products that we want to limit access to for children, e.g. candy. The packaging is reusable and can be refilled with goods again.

### 3. Sonopost – paper protective profile

#### SONOCO - ALCORE Sp. z o.o.

Sonopost is an innovative packaging solution for protecting products in demanding conditions. It is a great alternative to packaging made of Styrofoam and other plastics. The product is made from 100% recycled paper from Sonoco's internal network of paper mills.
