

1. Innovative STALICO® SolarSight Camera Tower

GR TECHNICS BV / LINC POLSKA Sp. z o.o.

The design of this camera mounting tower is optimal for transport (cost savings) and offers freedom in device installation. It features lightweight, flexible, impact-resistant 3x240Wp solar panels tilted towards the sun (better efficiency). Reduced CO2 emissions and autonomous operation are possible thanks to hybrid power supply from 3 panels, batteries or a methanol fuel cell. Other advantages of the tower are the compact, stable construction and ergonomic double door system.

2. Mini iTower

VCS Sp. z o.o. / LINC POLSKA Sp. z o.o.

'Build – Enable – Protect.' – this is the Mini iTower, an innovative, autonomous, mobile alarm system. Thanks to its compact design, it is practical to transport (one person is enough), quick to set up (just a few minutes) and ready to operate (factory configured). Operating 24 hours a day, seven days a week, it utilises its independent solar power supply. With remote video verification based on photos, it effectively eliminates false alarms.

3. Hörmann Mobile Road Blocker M30

HORMANN POLSKA Sp. z o.o.

The mobile Hörmann Road Blocker M30 is a modern system that protects public spaces against uncontrolled vehicle entry. With its modular design the system can be quickly adapted to the road width, and installation takes only about 20 minutes and requires no construction work. Certified impact resistance of 750,000 J ensures a high level of safety during mass events and in urban spaces.

4. EchoGuard Radar

Echodyne Corporation / LINC POLSKA Sp. z o.o.

EchoGuard – the smallest 4D radar in its class, designed to protect critical infrastructure and support anti-drone systems, with a detection range measured in kilometres. It can detect people, vehicles and drones, distinguishing them from birds, for example. This is an ideal solution for protecting facilities from land, water or air. Because the radar is the size of a notebook, it can easily fit into a backpack or hang on a drone, which makes its use very diverse.

5. SilentCASE

BT ELECTRONICS Sp. z o.o.

BT ELECTRONICS Sp. z o.o. – SUBMITTING ENTITY and producer SilentCASE isolates radio and audio signals. This is a professional solution that ensures full protection of information against unauthorised transmission and eavesdropping. The damping case effectively blocks GSM, Wi-Fi, Bluetooth and GPS signals, and neutralises microphones through active ultrasound emission.
